Reshaping data (Wide vs. Long)

Wide -> Long

country	1999	2000
A	0.7K	2K
B	37K	80K
C	212K	213K

country	year	cases
A	1999	0.7K
B	1999	37K
C	1999	212K
A	2000	2K
B	2000	80K
C	2000	213K

`pivot_longer` (previously `gather`)

From data import cheatsheet

Syntax

```
(d = tibble::tribble(
  ~country, ~"1999",  ~"2000",
        "A", "0.7K",     "2K",
        "B",  "37K",    "80K",
        "C", "212K",   "213K"
))
```

```
# A tibble: 3 × 3
  country `1999` `2000`
  <chr>   <chr>  <chr>
1 A       0.7K   2K
2 B       37K    80K
3 C       212K   213K
```

```
pivot_longer(
  d,
  cols = "1999":"2000",
  names_to = "year",
  values_to = "cases"
)
```

```
# A tibble: 6 × 3
  country year  cases
  <chr>   <chr> <chr>
1 A       1999  0.7K
2 A       2000  2K
3 B       1999  37K
4 B       2000  80K
5 C       1999  212K
6 C       2000  213K
```

Long -> Wide

country	year	type	count
A	1999	cases	0.7K
A	1999	pop	19M
A	2000	cases	2K
A	2000	pop	20M
B	1999	cases	37K
B	1999	pop	172M
B	2000	cases	80K
B	2000	pop	174M
C	1999	cases	212K
C	1999	pop	1T
C	2000	cases	213K
C	2000	pop	1T

country	year	cases	pop
A	1999	0.7K	19M
A	2000	2K	20M
B	1999	37K	172M
B	2000	80K	174M
C	1999	212K	1T
C	2000	213K	1T

`pivot_wider` (previously `spread`)

From data import cheatsheet

Syntax

```
( d = tibble::tribble(
    ~country, ~year,   ~type, ~count,
         "A",  1999, "cases", "0.7K",
         "A",  1999,   "pop",  "19M",
         "A",  2000, "cases",   "2K",
         "A",  2000,   "pop",  "20M",
         "B",  1999, "cases",  "37K",
         "B",  1999,   "pop", "172M",
         "B",  2000, "cases", " 80K",
         "B",  2000,   "pop", "174M",
         "C",  1999, "cases", "212K",
         "C",  1999,   "pop",   "1T",
         "C",  2000, "cases", "213K",
         "C",  2000,   "pop",   "1T"
  )
)
```

From data import cheatsheet

Example 1 - tidy grades

Is the following data tidy?

```
grades = tibble::tribble(
  ~name,   ~hw_1, ~hw_2, ~hw_3, ~hw_4, ~proj_1, ~proj_2,
  "Alice",    19,    19,    18,    20,      89,      95,
  "Bob",      18,    20,    18,    16,      77,      88,
  "Carol",    18,    20,    18,    17,      96,      99,
  "Dave",     19,    19,    18,    19,      86,      82
)
```

How would we calculate a final score based on the following formula,

$$\text{score} = 0.5 \frac{\sum_i \text{hw}_i}{80} + 0.5 \frac{\sum_j \text{proj}_j}{200}$$

Semi-tidy approach

```
grades %>%
  mutate(
    hw_avg = (hw_1+hw_2+hw_3+hw_4)/4,
    proj_avg = (proj_1+proj_2)/2
  ) %>%
  mutate(
    overall = 0.5*(proj_avg/100) + 0.5*(hw_avg/20)
  )
```

```
# A tibble: 4 × 10
  name    hw_1  hw_2  hw_3  hw_4 proj_1 proj_2 hw_avg proj_avg overall
  <chr>  <dbl> <dbl> <dbl> <dbl>  <dbl>  <dbl>  <dbl>    <dbl>   <dbl>
1 Alice     19    19    18    20     89     95   19        92     0.935
2 Bob       18    20    18    16     77     88   18        82.5   0.862
3 Carol     18    20    18    17     96     99   18.2      97.5   0.944
4 Dave      19    19    18    19     86     82   18.8      84     0.889
```

pivot_longer (Wide -> Long)

```
tidyr::pivot_longer(
  grades,
  cols = hw_1:proj_2,
  names_to = "assignment",
  values_to = "score"
)
```

```
# A tibble: 24 × 3
   name  assignment score
   <chr> <chr>      <dbl>
 1 Alice hw_1          19
 2 Alice hw_2          19
 3 Alice hw_3          18
 4 Alice hw_4          20
 5 Alice proj_1        89
 6 Alice proj_2        95
 7 Bob   hw_1          18
 8 Bob   hw_2          20
 9 Bob   hw_3          18
10 Bob   hw_4          16
# … with 14 more rows
```

Split type and id

```
tidyr::pivot_longer(
  grades,
  cols = hw_1:proj_2,
  names_to = c("type", "id"),
  names_sep = "_",
  values_to = "score"
)
```

```
# A tibble: 24 × 4
   name  type  id    score
   <chr> <chr> <chr> <dbl>
 1 Alice hw    1        19
 2 Alice hw    2        19
 3 Alice hw    3        18
 4 Alice hw    4        20
 5 Alice proj  1        89
 6 Alice proj  2        95
 7 Bob   hw    1        18
 8 Bob   hw    2        20
 9 Bob   hw    3        18
10 Bob   hw    4        16
# … with 14 more rows
```

Tidy approach?

```
grades %>%
  tidyr::pivot_longer(
    cols = hw_1:proj_2,
    names_to = c("type", "id"),
    names_sep = "_",
    values_to = "score"
  ) %>%
  group_by(name, type) %>%
  summarize(
    total = sum(score),
    .groups = "drop"
  )
```

```
# A tibble: 8 × 3
  name  type  total
  <chr> <chr> <dbl>
1 Alice hw       76
2 Alice proj    184
3 Bob   hw       72
4 Bob   proj    165
5 Carol hw       73
6 Carol proj    195
7 Dave  hw       75
8 Dave  proj    168
```

pivot_wider - (Long -> Wide)

```
grades %>%
  tidyr::pivot_longer(
    cols = hw_1:proj_2,
    names_to = c("type", "id"),
    names_sep = "_",
    values_to = "score"
  ) %>%
  group_by(name, type) %>%
  summarize(
    total = sum(score),
    .groups = "drop"
  ) %>%
  tidyr::pivot_wider(
    names_from = type,
    values_from = total
  )
```

```
# A tibble: 4 × 3
  name      hw  proj
  <chr> <dbl> <dbl>
1 Alice    76   184
2 Bob      72   165
3 Carol    73   195
4 Dave     75   168
```

Wrapping up

```
grades %>%
  tidyr::pivot_longer(
    cols = hw_1:proj_2,
    names_to = c("type", "id"),
    names_sep = "_",
    values_to = "score"
  ) %>%
  group_by(name, type) %>%
  summarize(
    total = sum(score),
    .groups = "drop"
  ) %>%
  tidyr::pivot_wider(
    names_from = type,
    values_from = total
  ) %>%
  mutate(
```

```
# A tibble: 4 × 4
  name      hw  proj score
  <chr> <dbl> <dbl> <dbl>
1 Alice    76   184 0.935
2 Bob      72   165 0.862
3 Carol    73   195 0.944
4 Dave     75   168 0.889
```

Exercise 1

The `palmerpenguin` package contains measurement data on various penguin species on islands near Palmer Station in Antarctica. The code below shows the # of each species measured on each of the three islands (missing island, penguin pairs implies that species does not occur on that island).

```
1 palmerpenguins::penguins %>%
2   count(island, species)
```

```
# A tibble: 5 × 3
  island    species       n
  <fct>     <fct>     <int>
1 Biscoe    Adelie       44
2 Biscoe    Gentoo      124
3 Dream     Adelie       56
4 Dream     Chinstrap    68
5 Torgersen Adelie       52
```

Starting from these data construct a contingency table of counts for island (rows) by species (columns) using the pivot functions we've just discussed.

05:00

Rectangling

Star Wars & repurrrsive

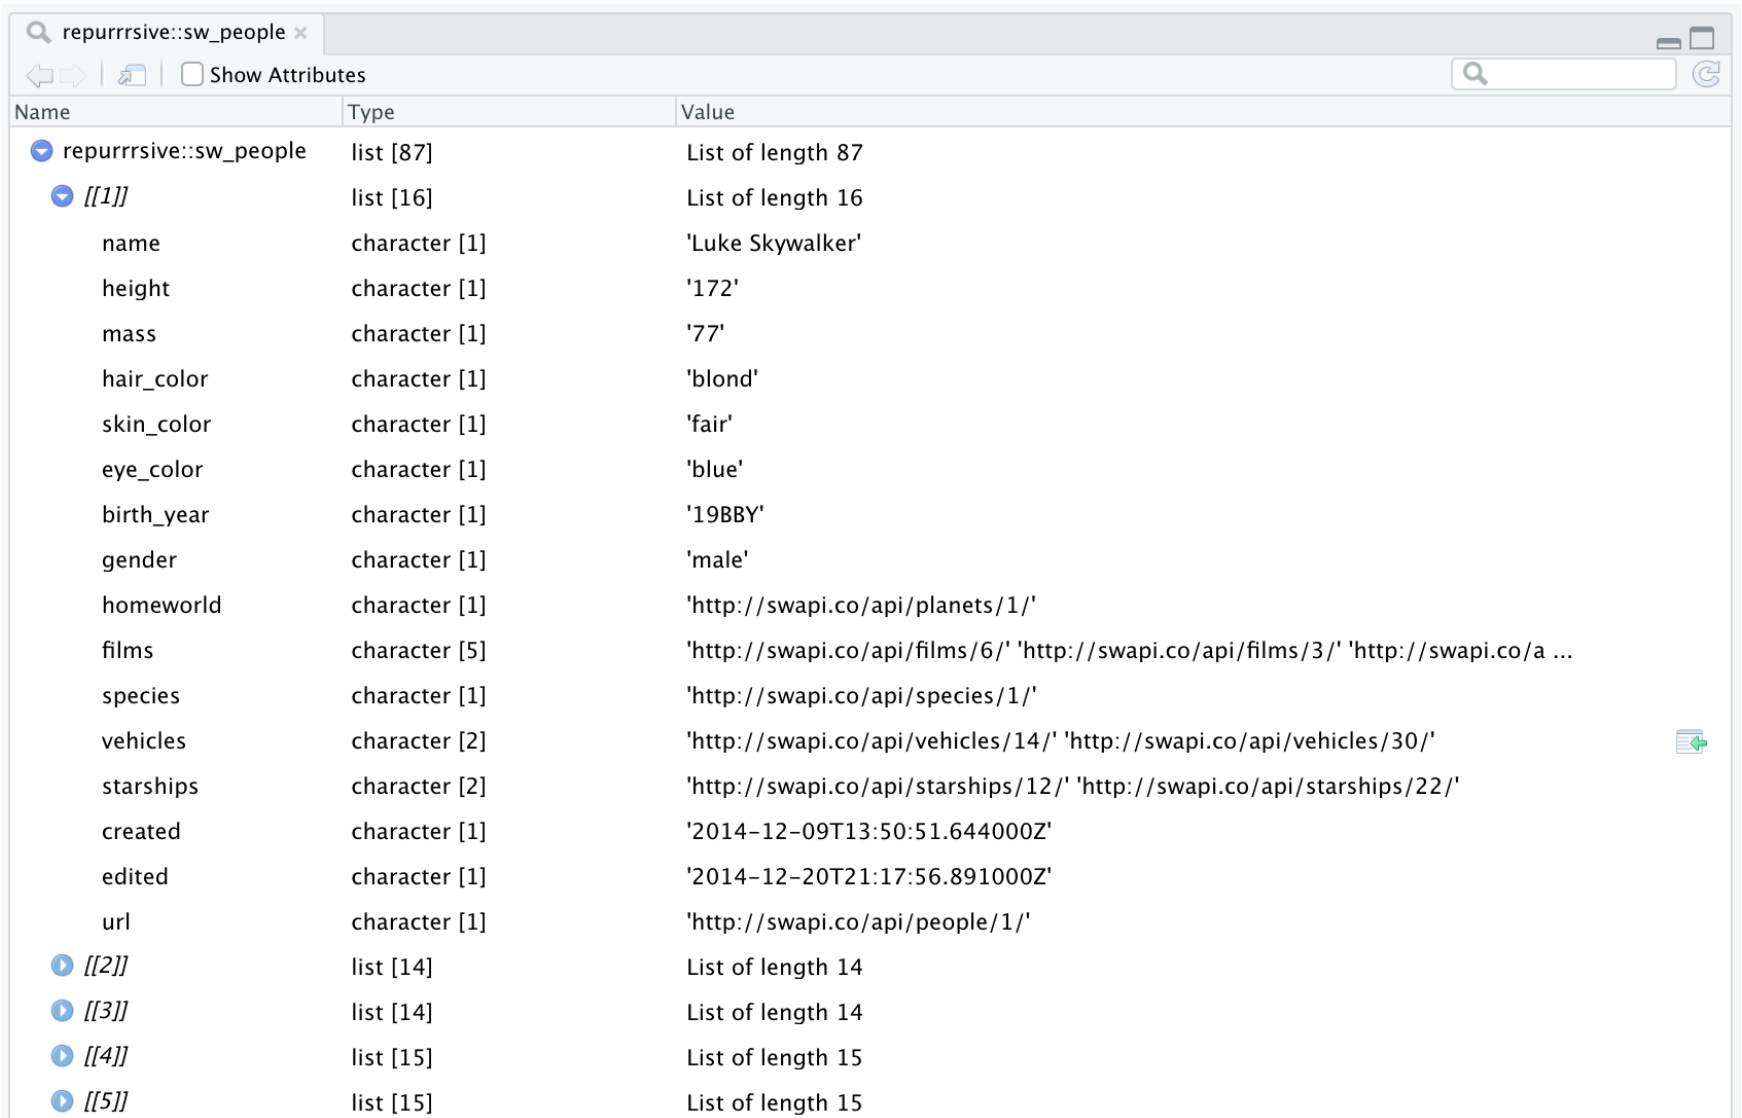
`repurrrsive` is a package that contains a number of interesting example data sets that are stored in a hierarchical format. Many come from web-based APIs which provide results as JSON.

```
1 str(repurrrsive::sw_people)
```

```
List of 87
 $ :List of 16
  ..$ name      : chr "Luke Skywalker"
  ..$ height    : chr "172"
  ..$ mass      : chr "77"
  ..$ hair_color: chr "blond"
  ..$ skin_color: chr "fair"
  ..$ eye_color : chr "blue"
  ..$ birth_year: chr "19BBY"
  ..$ gender    : chr "male"
  ..$ homeworld : chr "http://swapi.co/api/planets/1/"
  ..$ films     : chr [1:5] "http://swapi.co/api/films/6/" "http://swapi.co/api/films/3/"
"http://swapi.co/api/films/2/" "http://swapi.co/api/films/1/" ...
  ..$ species   : chr "http://swapi.co/api/species/1/"
```

RStudio data viewer

```
1 View(repurrrsive::sw_people)
```



repurrrsive::sw_people

Tidy data from nested lists

Recent versions of `tidyr` have added several functions that are designed to aide in the tidying of hierarchical data. Since they are part of `tidyr` all of the following functions work with data frames.

From `hoist()`, `unnest_longer()`, and `unnest_wider()` provide tools for rectangling, collapsing deeply nested lists into regular columns.

Lists as columns

```
(sw_df = tibble::tibble(
  people = repurrrsive::sw_people
))
```

```
# A tibble: 87 × 1
   people
   <list>
 1 <named list [16]>
 2 <named list [14]>
 3 <named list [14]>
 4 <named list [15]>
 5 <named list [15]>
 6 <named list [14]>
 7 <named list [14]>
 8 <named list [14]>
 9 <named list [15]>
10 <named list [16]>
# … with 77 more rows
```

```
sw_df %>%
  as.data.frame() %>%
  head()
```

```
                                                
```

```
[1] 87
```

Unnesting

```
sw_df %>%
  unnest_wider(people)
```

```
# A tibble: 87 × 16
   name        height mass  hair_…¹ skin_…² eye_c…³ birth…⁴ gender homew…⁵ films
   <chr>       <chr>  <chr> <chr>   <chr>   <chr>   <chr>   <chr>  <chr>   <lis>

Joining people and starships

```
sw_df %>%
  unnest_wider(people) %>%
  select(name, starships) %>%
  unnest_longer(starships) %>%
  left_join(ships, by = c("starships" = "url"))
```

```
# A tibble: 98 × 3
   name               starships                          ship
   <chr>              <chr>                              <chr>
 1 Luke Skywalker     http://swapi.co/api/starships/12/ X-wing
 2 Luke Skywalker     http://swapi.co/api/starships/22/ Imperial shuttle
 3 C-3PO              <NA>                               <NA>
 4 R2-D2              <NA>                               <NA>
 5 Darth Vader        http://swapi.co/api/starships/13/ TIE Advanced x1
 6 Leia Organa        <NA>                               <NA>
 7 Owen Lars          <NA>                               <NA>
 8 Beru Whitesun lars <NA>                               <NA>
 9 R5-D4              <NA>                               <NA>
10 Biggs Darklighter  http://swapi.co/api/starships/12/ X-wing
```

Putting it together

```
sw_df %>%
  unnest_wider(people) %>%
  select(name, starships) %>%
  unnest_longer(starships) %>%
  inner_join(ships, by = c("starships" = "url")) %>%
  select(-starships) %>%
  group_by(name) %>%
  summarize(ships = list(ship), .groups = "drop")
```

```
# A tibble: 20 × 2
   name               ships
   <chr>              <list>
 1 Anakin Skywalker   <chr [3]>
 2 Arvel Crynyd       <chr [1]>
 3 Biggs Darklighter  <chr [1]>
 4 Boba Fett          <chr [1]>
 5 Chewbacca          <chr [2]>
 6 Darth Maul         <chr [1]>
 7 Darth Vader        <chr [1]>
 8 Gregar Typho       <chr [1]>
```

```r
sw_df %>%
  unnest_wider(people) %>%
  select(name, starships) %>%
  unnest_longer(starships) %>%
  inner_join(ships, by = c("starships" = "url")) %>%
  select(-starships) %>%
  group_by(name) %>%
  summarize(ships = paste(ship, collapse = ", "), .groups = "drop")
```

```
# A tibble: 20 × 2
   name               ships
   <chr>              <chr>
 1 Anakin Skywalker   Trade Federation cruiser, Jedi Interceptor, Naboo fighter
 2 Arvel Crynyd       A-wing
 3 Biggs Darklighter  X-wing
 4 Boba Fett          Slave 1
 5 Chewbacca          Millennium Falcon, Imperial shuttle
 6 Darth Maul         Scimitar
 7 Darth Vader        TIE Advanced x1
 8 Gregar Typho       Naboo fighter
 9 Grievous           Belbullab-22 starfighter
10 Han Solo           Millennium Falcon, Imperial shuttle
```

Exercise 2

1. Which planet appeared in the most starwars film (according to the data in `sw_planets`)?
2. Which planet was the homeworld of the most characters in the starwars films?
